Excerpt from Rural School Architecture: School Room Decoration; Appendix to the XXIII Biennial Report of the Superintendent of Public Instruction Every foot of unnecessary glass is a detriment. It lets in the heat in summer and the cold in winter. Cold draughts are proverbial causes of illness, and the most dangerous draught is one that strikes the back. Therefore there should never be full length windows at the back of a school room unless they are provided with double sash and have steam pipes beneath sufficient to counteract the. Cold draught. Furthermore, unnecessary windows take from the wall space needed for other uses. Wide windows let in more light than the same amount of glass in narrow windows. The diagonal rays are largely cut off by the thick ness of the wall in narrow windows. Three wide Windows will light almost any school room better than four or five narrow ones, and will have fewer cracks for cold air.
