Condition: New. Publisher/Verlag: Wiley-VCH | Energy Solutions for the Future | Here the authors reveal the details associated with a switch to sustainable energy that are routinely swept under the table in public discussions. In a highly readable manner, they provide ammunition for debate, underpin opinions using facts, and challenge our popular beliefs. | In their book Nicola Armaroli, Vincenzo Balzani and Nick Serpone uncover the background details associated with a transition to sustainable energy production that are routinely swept under the table in public discussions. They are not only concerned with the (alleged) advantages and disadvantages of any one energy generation technology from a technical viewpoint, but also with the ecological, economic, political and social consequences of an inevitable transition. In a highly readable manner aimed at an international audience, the authors introduce the often misused and sometimes abused term energy and give a lucid account of the development of energy production from timber to nuclear energy and renewable energies. They compare various energy generation methods with respect to their efficiency and practicability for large-scale implementation and examine if, and how, these methods live up to the expectations and promises their proponents make. In addition, the authors juxtapose the political and economic prerequisites in different regions of the world that advance, or hinder, an energy turnaround. They round off their book by debunking the seventeen most popular myths often cited in discussions on energy issues. As a result, the authors provide ammunition for debate, underpin (and unsettle) opinions using facts, and challenge comfortable and popular chains of reasoning. | Preface XIII Introduction 11 What Is Energy? 5 Energy and Related Terms 6 From One Energy Form to Another 7 Sources of Energy 8 The Pillars of the Universe 9 Particles in Motion 9 Heat (Warmth) - an Exchangeable Energy 10 You Can't Run Away from Them - the...
