Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from How to Find the Stars: With Indications of the Most Interesting Objects in the Starry Heavens, and an Account of the Astronomical Lantern and Its Use The Planets (from the Greek word meaning to which move among the fixed stars, cannot be represented on this Lantern. Nor is it necessary, since it is very easy to identify the principal planets: Venus, Jupiter, Mars, Saturn. Mercury is less easily perceived, but may sometimes be discovered just after sunset, in the western Sky, especially in March. Seen through a telescope, even of low power, Venus, Jupiter, and Saturn are very interesting Objects. Venus is Often seen as a brilliant crescent, especially when it is brightest. I once showed it to a working man, through my telescope, and he manifested no surprise. He thought he was looking at the moon. Jupiter, with his belts and four satellites, always arranged on a nearly straight line, is surprisingly beautiful. Saturn, hanging in the sky, with its marvellous ring, suspended, surrounding it, is always an Object of great interest. A telescope of low power shows these Objects to advantage. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy.
