

Stained Glass Craft Made Simple: Step-by-Step Instructions Using the Modern Copper Foil Method

By J. McDonell

Dover Publications Inc., United States, 1986. Paperback. Book Condition: New. 272 x 202 mm. Language: English . Brand New Book. The centuries-old method of assembling stained glass involves connecting the various shapes with bulky strips of lead called came. An innovative technique using copper foil offers stained glass enthusiasts an easy-to-learn, easy-to-do alternative to working with lead came. Stained Glass Craft Made Simple shows how anyone even a beginner can make beautiful stained glass objects using the copper-foil method. Connecting the glass pieces with the thinner, more pliable copper foil is easier on the fingers, and the material itself allows for more intricate, delicate designs. Because the copper-foil seams are soldered over the entire length rather than only at the joints, stained glass designs made with this technique can withstand the weight of hanging better than those made with lead came. This expert manual provides thorough instructions with 44 photographs, drawings, and diagrams to explain every step of the copper-foil method: patterns and pattern cutting, scoring glass, grozing, foiling, soldering, framing, patinas, and more. A complete list of equipment and material makes it easy to get started. Helpful hints explain how to choose and purchase glass to enhance your design....
