Reviews

Simply no phrases to explain. It is definitely simplistic but shocks from the fifty percent from the pdf. You may like the way the blogger write this ebook.

Schumacher considered it his duty as editor to insert the communication, but evidently did not give credit to it (Astron. Nachr. No. 273). In vol. ii. of the Correspondence between Olbers and Bessel, mention is made in p. 162 of an observation at Vienna by Steinhilber, of a dark and well-defined spot of circular form which passed over the sun s diameter in five hours. Olbers, from these data, estimates the distance from the sun to be 0.19, and the periodic time thirty days. It is remarkable that Stark saw about noon of the same day a singular and well-defined circular spot, which was not visible in the evening. This is one of the instances in vol. xx. of the Monthly Notices of the Astronomical Society. These accounts appear to prove that transits of dark round objects across the sun are real phenomena; but it would perhaps be premature to conclude that they are planetary bodies. If the object observed by Lescaubault be a planet, it is certainly very surprising that it has not been often seen. Schwabe, after observations of the sun s face continued through thirty-three years, has recorded no instance of such a transit. It is probable that now attention has been especially drawn to the subject, future observations, accompanied by measures (of which Lescaubault s are the first instance), may throw light on the nature of these phaenomena. April 23, 1860. Professor De Morgan read a paper On...
