It has been widely recognized that the new physics results from a high energy collider are related to the detector capabilities, and that future detectors must solve the problems presented by the new environment. Vertex detectors, in particular, will have to sustain enormous rates, have a great resistance to radiation damage, while retaining good spatial accuracy. Promising technologies are emerging, and gaseous detectors are improving: this workshop was intended as a point of reference towards future detectors, with particular emphasis on experimental results achieved so far. We wish to thank the Ettore Majorana Center for the splendid hospitality in Erice; and the secretaries of the conference, R. Nania and G. Anzivino for their hard work in collecting and organizing these proceedings. F. Villa Stanford Linear Accelerator Center Stanford University v CONTENTS Tracking at 1 Te V A.
