Creating Rhythms

By Stefan Hollos

Abrazol Publishing. Paperback. Condition: New. 126 pages. Dimensions: 8.5in. x 5.5in. x 0.3in. This book is the result of a lifelong love of music and an obsession with patterns. The authors have for many years been exploring methods to find, create, describe and analyze patterns. They wrote this book to show how some of these methods can be used to generate rhythms. The methods can produce an almost endless variety of new rhythms along with popular traditional ones. For a lover of music what could be more wonderful than that The study of patterns at anything beyond a superficial level does require some mathematics. Fortunately the mathematics can be kept at a very elementary level. Anyone comfortable with a little algebra should have no trouble understanding and using these rhythm generation methods. Only the last chapter on stochastic rhythms requires a bit more than elementary mathematics. Any reader who faints at the sight of an equation should probably not buy the book. The book has many example rhythms for which there are MIDI files that you can listen to on the books website: abrazol.com/books/rhythm1. There you can also find free software for generating rhythms, doing calculations, and creating MIDI files....
