Brand New Book ***** Print on Demand *****.Excerpt from The Animal: As a Machine and a Prime Motor, and the Laws of Energetics I. Energy and its Transformations are the source and the method of all useful work, as of all natural phenomena involving motions of masses or of molecules of whatever kind. All prime movers are machines by means of which man diverts energy from natural channels and compels it to do his own work. The water-wheels and windmills simply transfer the energy of the moving fluid to the machinery of the transmission through which it performs useful work; the heat-engines and electric machinery transfer energy, and at the same time convert it from the thermal or the electrical to the dynamic form for application, and thermodynamic or electro-dynamic apparatus thus have two distinct functions. Reviews

Basically no phrases to clarify. It really is written in straightforward phrases rather than hard to understand. You will not sense monotony at any moment of your own time (that's what catalogues are for concerning if you ask me).
