Excerpt from Small Aperture Analysis of the Dual Tem Cell and an Investigation of Test Object Scattering in a Single Tem Cell Small aperture theory is used to investigate the dual tem cell. Analyzing coupling through an empty versus a loaded aperture leads to a model of dual tem cell shielding effectiveness measurements. Small obstacle scattering yields results for both the field perturbation and the change in a cell s transmission line characteristics due to the presence of a test object in a tem cell. In each case, theoretical values are compared to experimental data. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
