RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 30 pages. Original publisher: Ithaca, N. Y. : Cornell University, Dept. of Computer Science, 1990 OCLC Number: (OCoLC)62785328 Subject: Computer network protocols. Excerpt: . . . 13 MTP: . 4a Atomic Multicast Transport Protocol have less opportunity to react to missing data. Data can be missed for a variety of reasons. If constrained to the local net, the data lost due to corruption should be around one packet in 50,000 r. Four orders of magnitude more packets are lost at receiving stations, including packet switch routers, than over physical links. The losses are usually the result of congestion and resource starvation at lower layers due to the processing of (nearly) back-to-back packets. One can only require that a receiving station be capable of receiving some number of back-to-back packets successfully, and that number must be at least greater than the window size. The probability of success can be made as high as needed by providing the receiver the opportunity to observe the data multiple times. At worst, the receiving station detects packet loss using timers. Such timers might have a granularity...

Reviews

Very good eBook and valuable one. This is for anyone who states that there was not a worth reading. You will not truly feel monotony at any time of your own time (that's what catalogs are for concerning if you question me).
