

Caracterisation Des Proprietes Optiques Et de La Temperature (Paperback)

By Guillaume FONTANILLES

Univ Europeenne, United States, 2010. Paperback. Condition: New. Language: French . Brand New Book. La comprehension de notre environnement necessite l etude de phenomenes radiatifs a l interface surface - atmosphere. Ces echanges d energie sont analyses a differents niveaux d echelle suivant la resolution spatiale du capteur. Cette these traite du domaine spectral infrarouge (3-14um) et s interesse aux milieux urbains. L objectif est de caracteriser les proprietes optiques et les temperatures de surface a partir de mesures directionnelles et spectrales. Pour cela, une premiere partie detaille la modelisation du signal en decrivant chacune de ses composantes radiatives. La suite des travaux introduit l analyse de l agregation lors d un changement d echelle spatiale. Enfin, la derniere partie decrit l inversion du modele d agregation dans le but de retrouver les parametres intrinseques des surfaces a partir de donnees hyperspectrales multi-angulaires. La methode d inversion est basee sur la methode des moindres carres optimisee par l algorithme de Gauss-Newton. Une analyse de sensibilite fixe les contraintes et les conditions d applications de cette methode. Les resultats de ces travaux sont utilises dans les etudes des ilots de chaleur urbains.
