## ISOLATION & CHARACTERIZATION OF BIOSURFACTANT PRODUCING BACTERIA

Isolation & Characterization  
of Biosurfactant Producing  
Bacteria  
The unexplored potential of bacteria

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | The unexplored potential of bacteria | Biosurfactants are amphiphilic compounds i.e., they contain both hydrophilic and hydrophobic moieties which partition preferentially at the interfaces such as liquid/liquid, gas/liquid or solid/liquid interfaces. This facilitates properties like emulsification, foaming, detergency and dispersing. Their low toxicity and eco-friendly nature and the wide range of potential industrial applications in bioremediation, health care, food processing and oil industries makes them a highly useful group of chemicals.

### Reviews

*Extensive information! It's this sort of great read through. It is amongst the most incredible book I have gone through. I realized this publication from my dad and he suggested this book to understand.*

-- Prof. Devon Bernhard PhD

*An extremely great ebook with perfect and lucid answers. This is certainly for anyone who states that there was not a well worth looking at. It has been designed in an exceptionally simple way and is particularly only soon after I finished reading through this ebook in which actually transformed me, modify the way in my opinion.*

-- Libbie Farrell
