

## Documentation for Assessment of Modal Pushover- Based Scaling Procedure for Nonlinear Response History Analysis of "Ordinary Standard" Bridges

Filesize: 9.09 MB

### ***Reviews***

*This sort of publication is almost everything and taught me to hunting forward and much more. Yes, it is actually play, continue to an amazing and interesting literature. I am pleased to tell you that this is basically the best book we have read through inside my individual life and could be he finest book for ever.*

## DOCUMENTATION FOR ASSESSMENT OF MODAL PUSHOVER- BASED SCALING PROCEDURE FOR NONLINEAR RESPONSE HISTORY ANALYSIS OF ?ORDINARY STANDARD? BRIDGES

[DOWNLOAD](#)

CreateSpace Independent Publishing Platform. Paperback. Condition: New. This item is printed on demand. 62 pages. Dimensions: 11.0in. x 8.5in. x 0.1in. The earthquake engineering profession is increasingly utilizing nonlinear response history analyses (RHA) to evaluate seismic performance of existing structures and proposed designs of new structures. One of the main ingredients of nonlinear RHA is a set of ground-motion records representing the expected hazard environment for the structure. When recorded motions do not exist (as is the case for the central United States), or when high-intensity records are needed (as is the case for San Francisco and Los Angeles), ground motions from other tectonically similar regions need to be selected and scaled. The modalpushover- based scaling (MPS) procedure recently was developed to determine scale factors for a small number of records, such that the scaled records provide accurate and efficient estimates of true median structural responses. The adjective accurate refers to the discrepancy between the benchmark responses and those computed from the MPS procedure. The adjective efficient refers to the record-to-record variability of responses. Herein, the accuracy and efficiency of the MPS procedure are evaluated by applying it to four types of existing ordinary standard bridges typical of reinforced-concrete bridge construction in California. These bridges are the single-bent overpass, multi span bridge, curved-bridge, and skew-bridge. As compared to benchmark analyses of unscaled records using a larger catalog of ground motions, it is demonstrated that the MPS procedure provided an accurate estimate of the engineering demand parameters (EDPs) accompanied by significantly reduced record-to-record variability of the responses. Thus, the MPS procedure is a useful tool for scaling ground motions as input to nonlinear RHAs of ordinary standard bridges. This item ships from La Vergne, TN. Paperback.
