Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Applications of the Kinetic Theory: To Gases, Vapors, Pure Liquids, and the Theory of Solutions This book presupposes a moderate acquaintance with the fundamentals of physics and chemistry, and a mathematical equipment involving familiarity with the differential calculus and at least the notation of the integral calculus. It embodies a course of lectures given at the University of California during the academic years 1898-1901, but includes for the sake of greater completeness of treatment some matter not given in the lectures. For detailed information regarding many of the topics mentioned, as for instance osmotic pressure, and electrolysis, and for a statement of the experimental basis for the theories presented the reader is referred to the standard texts which treat of these topics in extenso. The intent in this volume is not so much to discuss these facts and theories by themselves as to present their possible or probable relations to each other in the light of the kinetic theory.
