Brand New Book ***** Print on Demand *****.Excerpt from Gold Veins Near Great Falls, Maryland: A Discussion of the History of Prospecting and Mining in the Great Falls Area and a Description of the Gold-Bearing Quartz Veins Small deposits of native gold are present along an anastomosing system of quartz veins and shear zones just east of Great Falls, Montgomery County, Md. The deposits were discovered in 1861 and were worked sporadically until 1951, yielding more than ounces of gold. The vein system and the principal veins within it strike a few degrees west of north, at an appreciable angle to foliation and fold axial planes in enclosing rocks of the Wisahickon Formation of late Precambrian(age. The veins cut granitic rocks of Devonian or pre-devonian age and may be as young as Triassic. Further development of the deposits is unlikely under present economic conditions because of their generally low gold content and because much of the vein system lies on park property, but study of the Great Falls vein system may be useful in the search for similar deposits elsewhere in the Appalachian Piedmont. It is really a remarkable ebook that we actually have ever read through. I actually have studied and I am confident that I am going to study once more yet again in the foreseeable future. It is extremely difficult to leave it before concluding, once you begin to read the book.
