

## Spin Transport in Ferromagnet-Semiconductor Heterostructures

Filesize: 4.74 MB

### **Reviews**

*The ideal pdf i at any time read. I am quite late in start reading this one, but better then never. You will like the way the author create this book.*

## SPIN TRANSPORT IN FERROMAGNET-SEMICONDUCTOR HETEROSTRUCTURES

To save **Spin Transport in Ferromagnet-Semiconductor Heterostructures** eBook, please follow the link listed below and download the document or have accessibility to other information which are in conjunction with SPIN TRANSPORT IN FERROMAGNET-SEMICONDUCTOR HETEROSTRUCTURES book.

LAP Lambert Acad. Publ. Apr 2010, 2010. Taschenbuch. Book Condition: Neu. 220x151x15 mm. This item is printed on demand - Print on Demand Neuware - The book provides an introductory review of the concepts in physics of semiconductor heterostructures (quantum wells) and basic problems in spin transport and spin relaxation. Materials discussed in the book are iron and iron-cobalt as conventional ferromagnets, and III-V semiconductors (GaAs, InGaAs, AlGaAs). A detailed guidance is provided on performing and analyzing spin photodiode experiments, in which spin polarized electrons are created via excitation with circularly polarized light, and transferred across the interface (the spin ejection process). The book also addresses the spin injection process, where a fraction of electrons preserve their spin polarization while tunneling through the Schottky barrier, from the FM into the SC (the spin-LED concept). A supplemental chapter addressing magnetic anisotropy properties of such heterostructures and its active role in the process of spin transport is provided. The book contains 119 relevant figures and 6 appendices addressing experimental techniques in electro- and magneto-optics, numerical modeling and nanofabrication of spin diodes. MS PowerPoint slides are available from the author, for lecture and training preparation. 240 pp. Englisch.
