Reviews

This kind of publication is every little thing and taught me to looking ahead of time and a lot more. It is packed with wisdom and knowledge Once you begin to read the book, it is extremely difficult to leave it before concluding.
(Ida Herman)

BULLETIN OF THE BOTANICAL DEPARTMENT, JAMAICA VOLUME 5

Rarebooksclub.com, United States, 2013. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can usually download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1898 edition. Excerpt: . enters the root tissues--by Tschirch, Brunchorst, and others. And the relation between the plant and its nodules has, to some extent, been explained by the Rothamsted experiments, in which the growth and ripening of the plant were shown to be coincident with progressive exhaustion of the nitrogenous matter of the nodules whilst on the other hand, with plants not ripe, or of more than annual growth, there was accumulation in the nodules--that is, provision for future growth. (6) It must, however, be admitted that we are still completely in the dark as to the nature of the chemical process by which nitrogen is first brought into combination within the nodules, and what is the first compound formed. As far as agricultural plants are concerned, it is only those of the leguminous sub-order Papilionaceae on the roots of which nodules occur, and which in consequence can thrive without external application of combined nitrogen. It may, however, be mentioned that the symbiosis prevails in the case of other leguminous plants--for instance, of the sub-orders Mimoseae and Caesalpinieae, (7) and even of non-leguminous plants such as the common alder. (8) The methods employed in pot experiments for inducing the formation of nodules have been the application of a soil extract (Hellriegel), of soil itself (Frank), or the inoculation has been made directly from the contents of a nodule. Hellriegel's earliest results showed that all soil extracts are not equally suitable for inoculating certain plants; but the most systematic and...
