CreateSpace Independent Publishing Platform. Paperback. Condition: New. This item is printed on demand. 30 pages. Dimensions: 11.0in. x 8.5in. x 0.1in. During the 1988-1989 dormant season, the Coopers Rock Crop Tree Demonstration Area was established in a 55-year-old central Appalachian hardwood forest in north-central West Virginia. After treatment, 89 northern red oak (*Quercus rubra* L.) and 147 yellowpoplar (*Liriodendron tulipifera* L.) crop trees were monitored for 20 years. This report summarizes the growth in diameter at breast height (d. b. h.) and crown development of crop trees from age 55 to 75 after they received various degrees of crown release resulting from crop tree management and traditional area-wide thinning. Annual d. b. h. growth response is presented to illustrate the year-to-year fluctuations in growth that occurred throughout the demonstration area. In general, d. b. h. growth response and crown expansion were related to the degree of crown release. Northern red oak exhibited a greater response in d. b. h. growth and crown expansion than did yellow-poplar over the 20-year study period. This item ships from La Vergne, TN. Paperback.
