DC Prodrum 3: 47. 1828. Cercus imbricatits, l law. Rev. Pl. Sue. p. 70. 1821. This is the common cylindropuntia of the highland region of Mexico. The fruit is not eaten by either man or beast, so far as we have been able to determine. As the analyses show, it is very high in acid, and because of this and the presence of so much plant mucilage and absence of sugar it is not at all palatable. Before the advent of the coal tar dyes into Mexico this fruit had an important place in the arts. The tunas were gathered, chopped up into small pieces, and boiled, the fiber and seed being filtered out and the extract used to dissolve and set cochineal dye. It is still used in this way to a limited extent. Experiments which we have conducted...
