

## Polymer-Ceramic Composites as Dielectric and Piezoelectric Material

Filesize: 8.54 MB

### **Reviews**

*A must buy book if you need to adding benefit. it was actually writtern quite perfectly and beneficial. You wont really feel monotony at anytime of your time (that's what catalogs are for regarding in the event you question me).*

## POLYMER-CERAMIC COMPOSITES AS DIELECTRIC AND PIEZOELECTRIC MATERIAL

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Polymer nanocomposites were prepared via room temperature mixing of polydimethylsiloxane (PDMS) and polyurethane (PU) elastomers as base matrices and titania nanoparticles (both normal and heat treated) as filler material. In case of polyurethane-titania nanocomposites two different mixing methods were used whereas polydimethylsiloxane-titania nanocomposites were prepared using two different types of titania particles, namely normal and heat treated ones. Different characterization techniques like fourier transform infrared (FTIR) spectroscopy, X-ray diffraction (XRD), thermogravimetric analysis (TGA), dynamic light scattering (DLS), high resolution transmission electron microscopy (HRTEM), field emission scanning electron microscopy (FESEM), and scanning probe microscopy (SPM) were used for these composites. The composition dependent electrical resistivity and dielectric properties of these composites were also measured. The effect of pressure on both DC resistivity and dielectric constant was studied for the PU-TiO<sub>2</sub> nanocomposites and found that both resistivity and dielectric constant changes with applied pressure which is again composition dependent. | Format: Paperback | Language/Sprache: english | 97 gr | 220x150x3 mm | 60 pp.
