

Focusing the Lens: A Framework for National Security Decision-Making with a Case Study of National Missile Defense

By Suzanne M. Vautrinot

BiblioScholar. Paperback. Condition: New. 106 pages. Dimensions: 9.7in. x 7.4in. x 0.2in. Can decision-makers determine whether the timing is favorable before pursuing a specific course of action in implementing a national security program, particularly an innovation that requires simultaneous changes in technology, organization, strategy and policy? National security innovators have no problem inventing a very clever pudding, but knowing when the pudding will be cooked becomes a more difficult task. To answer such a question, this paper develops the Lens Framework: a tool for analyzing the myriad of players and issues that color and shape the decision-making landscape. At the heart of this framework is the idea that, in an environment of constrained and competing resources, the decision to expend intellectual and fiscal capital to push a program forward must be accompanied by a predictive assessment of whether the program has the requisite consensus for success. This assessment is most difficult when the program requires fundamental changes in government institutions, policy, and technology; specifically, when it is a national security innovation. This item ships from multiple locations. Your book may arrive from Roseburg, OR, La Vergne, TN. Paperback.
