In addition to the subjects usually required in the Entrance Examinations of the Universities it contains exercises upon logarithms and the elementary parts of trigonometry, and a simple introduction to the methods of the differential and integral calculus. A discussion of the principles upon which the author has selected and presented the subject-matter of the exercises will be found in the companion volume on The Teaching of Algebra. That volume contains also suggestions as to the order in which the exercises should be taken, and a full statement of the preparatory teaching pre-supposed in each. It includes a similar treatment of the ground covered in Exercises in Algebra, Part II, in which the course commenced in the present book is completed. The author will be greatly obliged if readers who detect errors or obscurities in the examples or the answers will kindly direct his attention to them....
