

Evaluation of nutrients of gamma radiated garlic to improve its export

Filesize: 4.25 MB

Reviews

This book is definitely not easy to get going on reading through but extremely exciting to see. I am quite late in start reading this one, but better then never. I am pleased to explain how here is the finest book i actually have read inside my individual daily life and may be he best book for ever.

(Mrs. Ellie Yost II)

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Garlic (*Allium sativum*) is perennial with underground head known as bulbs and pungent bulblets known as cloves belonging to the genus *Allium* which is the second most cultivated vegetable after onion. Garlic is valued for its aroma and flavor. Garlic has a wide spectrum of measures like antibacterial, antiviral, antifungal and antiprotozoal. Under storage conditions garlic is susceptible to contamination by microbes and it undergoes sprouting phase. To overcome this problem gamma irradiation is suggested as a method to ensure food safety. The low dose irradiation level does not affect the garlic properties and provide longer shelf life against microbes attack. Garlic irradiated at 0.5kGy shows no change in the proximate composition as well as on the sensory properties. Therefore, the recommended dosage for the conservation of garlic is 0.5kGy. Irradiation at 0.5kGy on garlic sample has no negative effect on the nutritional quality of food, so irradiation at low dose is a promising technique to enhance the shelf life of garlic. | Format: Paperback | Language/Sprache: english | 68 pp.
