The height of the pier is such that a concave-grating spectrograph of 21 feet radius or a plane-grating spectrograph of 30 feet focal length may be employed if desired. The whole pier is inclosed by an outer concrete wall and roof to assist in maintaining a constant temperature. The telescope pier itself is hollow in construction, with three heavily reinforced floors running across it at different elevations. The walls are also strongly reinforced and further strengthened by four buttresses on the outside, two each on the east and west sides. The first floor, at a distance of 16 feet from the ground, is designed to carry a large water-tank, which will form the reservoir for the watercirculation system enveloping the 100-inch mirror. At a height of 25 feet is the floor on which the driving-clock, worm-gear, and...
