Forgotten Books, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from An Investigation Into the Breaking Down Points for Perfect Lubrication Under Varying Speeds, Pressures and Temperatures: A Thesis Submitted for the Degree of Bachelor of Science, Mechanical Engineering Course, University of Wisconsin, 1905 Friction, the highway robber of mechanical energy, as it is often aptly termed, has of late been the subject of much experimental research. Until recent years very little was known about the friction of bearings, but recently extensive tests have been made which have thrown considerable light on this subject, and have given us some very exact information. At the present day there are no journal bearings made which it is certain will not run hot sooner or later in the course of their Operation and many of the experiments performed in this connection have been made in the hope of gaining some alleviation of this trouble. Designers have been made to realize that journal friction is one of the most important points in machine construction. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.
