Heavy ion fragmentation, Cross sections, Fragmentation model Interactive program NUCFRAG presents an algorithm for an abrasion ablation model of heavy ion fragmentation which includes a second order correction for the surface energy term and addition of photonuclear dissociation to provide reasonable representation of the present elemental fragmentation cross sections. Using the Weizsacker-Williams method of virtual quanta, the photodissociation fragmentation cross sections are calculated and added to the nuclear fragmentation cross sections generated by an abrasion ablation model of heavy ion collision. The photodissociation cross sections are calculated for one nucleon removal only (either a proton or neutron). The nuclear interaction fragmentation cross sections are not calculated for target fragments and peripheral collisions with A A 0. 5. On C. D.
