## ATHEROTHROMBOSIS IN CLINICAL PRACTICE

Oxford University Press Inc. Paperback. Book Condition: new. BRAND NEW, Atherothrombosis in Clinical Practice, Deepak L. Bhatt, Atherothrombosis refers to the coupling of atherosclerosis and thrombosis, and it is the leading cause of the majority of preventable deaths in the modern world. The medical, economic, social, and societal consequences of atherothrombosis are enormous, which make it a dynamic area for development of new pharmacologic agents. Atherothrombosis in Clinical Practice focuses upon the many clinical manifestations of atherothrombosis and therapies that presently exist, with a focus on evolving therapeutic approaches. First, atherothrombosis is defined and the epidemiology is explored. Then, the specific manifestations of atherothrombosis (coronary artery disease, valvular heart disease, cerebrovascular disease, atrial fibrillation, peripheral artery disease) are concisely covered by distinguished experts in the field. Next, specific medications are discussed, with an emphasis on innovative therapies and investigational agents including experimental lipid-modifying, anti-inflammatory, antiplatelet, and anticoagulant agents. State-of-the-art treatment of hypertension and diabetes is described succinctly. Lifestyle modification, medical therapies, and where appropriate, invasive modalities are discussed. Controversies in areas such as cholesterol management and glycemic control are summarized. Part of the Oxford American Cardiology Library, this handbook provides a practical, evidence-based summary of the condition and the most up-to-date research to equip clinicians in managing this common clinical problem.
