ON SHARP EXTRAPOLATION THEOREMS

Condition: New. Publisher/Verlag: LAP Lambert Academic Publishing | Weighted theory and sharp bounds | Extrapolation is one of the most significant and powerful properties of the weighted theory. It basically states that an estimate on a weighted L_{p_0} space for a single exponent $p_0 > 1$ and all weights in the Muckenhoupt class A_{p_0} implies a corresponding L_p estimate for all $p, 1 < p < \infty$, and all weights in A_p . Sharp Extrapolation Theorems track down the dependence on the A_p characteristic of the weight. In this dissertation we generalize the Sharp extrapolation Theorem to the case where the underlying measure is $d\mu = u_0 dx$, and u_0 is an A weight. We also use it to extend Lerner's extrapolation techniques. Such Theorems can then be used to extrapolate some known initial weighted estimates in $L_2(wd\mu)$. In addition, for some operators this approach allows us to specify the weights $w_1 = u_0$ and to use known weighted results in $L_p(wd\mu)$ to obtain some estimates on the unweighted space. This work was inspired by the paper [Per1] where the L_2 weighted estimates for the dyadic square function were considered to obtain the sharp estimates for the so-called Haar Multiplier in L_2 . | Format: Paperback | Language/Sprache: english | 88 pp.
