It is claimed by many engineers that the fitness of a brick for paving purposes can only be determined by submitting it to actual wear in the street, and that no system of testing has been devised which will determine whether a brick possesses the qualities necessary for a good paving material. Even among the men who admit the necessity and appreciate the value of tests, there is a wide difference of opinion as to those which are necessary, and the methods of conducting same. The amount of absorption in a specified time is used by some cities as the single criterion of the quality of a brick, while...
