RareBooksClub. Paperback. Book Condition: New. This item is printed on demand. Paperback. 54 pages. Original publisher: Silver Spring, MD : U. S. Dept. of Commerce, National Oceanic and Atmospheric Administration, National Marine Fisheries Service, 2009 OCLC Number: (OCoLC)642703575 Subject: Sockeye salmon -- Population viability analysis -- Washington (State) -- Ozette Lake. Excerpt: . . . Introduction The Puget Sound Technical Recovery Team (PSTRT) was convened by the National Marine Fisheries Service to develop the technical basis for recovery plans for three Pacific salmon (*Oncorhynchus* spp.) evolutionarily significant units (ESUs) in Washington that are listed under the Endangered Species Act (ESA): Lake Ozette sockeye (*O. nerka*), Puget Sound Chinook (*O. tshawytscha*), and Hood Canal summer chum (*O. keta*). Key tasks of the PSTRT are to identify populations and describe the conditions of viable salmonid populations (VSPs) and ESUs. The foundation for accomplishing this for Pacific salmon is described by McElhany et al. (2000), who discuss delineating populations within an ESU, identify the key parameters used to describe the status of a population, define population viability as a probability of persistence over a specified time period, and discuss the means by which ESU delisting criteria can be based on alternative scenarios for the status of populations within the ESU. This PSTRT report identifies population and ESU viability criteria for the Lake Ozette sockeye salmon ESU. Based on the available information, the PSTRT has concluded that the Lake Ozette sockeye salmon ESU historically was comprised of a single population with several subpopulations (Currens et al. 2009). It follows that the ESUs one population must be viable in order that the ESU be viable; that is, determining population viability criteria is also determining ESU...
