

## Jet-FTIR Spectroscopy of Biomolecular Model Systems

By Corey Rice

Cuvillier Verlag Okt 2007, 2007. Taschenbuch. Book Condition: Neu. 210x147x12 mm. Neuware - Bridging the gaps between biology, chemistry and physics, biophysical chemistry studies the microscopic interactions that determine the macroscopic processes in all living organisms. Typical biomolecules such as proteins are complex, flexible macromolecules. They often occur in specific conformations among the vast number of possibilities and conformation has a strong influence on their function. Specific molecular interaction is the key to biomolecular function. Molecular recognition phenomena, therefore, are a basic concept in biochemistry. In order to understand molecular recognition, intermolecular forces have to be characterized in detail. 145 pp. Englisch.

### Reviews

*A must buy book if you need to adding benefit. This really is for all those who statte that there had not been a really worth looking at. Your daily life period will likely be change when you complete reading this publication.*

-- **Veronica Hauck DVM**

*A must buy book if you need to adding benefit. I have go through and that i am sure that i will gonna go through once more yet again down the road. I am just very happy to let you know that this is basically the best book i have got go through inside my own life and can be he very best book for at any time.*

-- **Eldridge Reilly**
