

Stress, Behavior and Immune Response

By Christine Schütt

Wolfgang Science Pabst Apr 2005, 2005. Taschenbuch. Book Condition: Neu. 208x146x10 mm. Neuware - This volume contains the proceedings of the 1st Alfried-Krupp-Wissenschaftskolleg-Symposium which was held at the University of Greifswald in 2004. It is dedicated to psychoneuroimmunology as a fascinating research field for bridging the gap between body and mind. From their point of view, different scientific disciplines give their specific in-sights into the complex interactions between organism, personality and environment. Clinical and research data from medicine, psychology and biology deal with the interrelation of immunoregulatory processes, genes, nervous system and behaviour under internal or external stress conditions. Thus, this cross-sectional approach makes a contribution to a better understanding of the etiology and the course of diseases such as HIV, chronic and acute inflammation, depression and others. The volume is addressed to clinicians, researchers and students in the fields of medicine, psychology and biology. 120 pp. Englisch.

Reviews

It is one of the most popular publications. It is actually written in easy words instead of confusing. You will like how the author created this book.
-- **Art Gislason**

Extensive information! It is this type of excellent study. I have read and I am sure that I will go through it again once more down the road. Once you begin to read the book, it is extremely difficult to leave it before concluding.
