

The Vitreous Body: Its Origin, Development, and Structure as Observed in the Eye of the Pig (Classic Reprint)

Filesize: 9.06 MB

Reviews

This book may be worth purchasing. It typically fails to expense excessive. It is extremely difficult to leave it before concluding, once you begin to read the book.

(Ken Watsica)

THE VITREOUS BODY: ITS ORIGIN, DEVELOPMENT, AND STRUCTURE AS OBSERVED IN THE EYE OF THE PIG (CLASSIC REPRINT)

Forgotten Books, United States, 2015. Paperback. Book Condition: New. 229 x 152 mm. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from The Vitreous Body: Its Origin, Development, and Structure as Observed in the Eye of the Pig The origin of the vitreous body of the eye has long been in doubt. Even the numerous and thorough investigations of the first decade of the present century, although clearing up many difficulties and correcting false notions, have failed to bring a satisfactory answer to the question, Is the vitreous body of the eye a derivative of the outer or middle germ layer; is it an ectodermal or mesodermal formation? A glance at some of the latest and most widely used textbooks, chosen at random, reveals the uncertainty existing among modern authors as to the origin of this interesting structure of the eye. Says Parker (page113), Mesoderm also makes its way into the optic cup, through the choroid fissure, and becomes the vitreous humour. Lillie, on the other hand, maintains (page275) the researches of the last few years have demonstrated that the vitreous body is primarily of ectodermal origin, its fibers arising as processes of cells of the inner layer of the optic cup and the matrix as secretion. Again, Prentiss and Arey assert (page381) that the vitreous body may be regarded as a derivative both of the ectoderm and the mesoderm. The reasons for this diversity of opinion among biologists may be reduced to the following: 1. The very delicate nature of the vitreous body, which differs so widely from all other tissues, renders its study extremely difficult. It requires special methods of technique not ordinarily employed in histological investigations. The difficulties of obtaining perfect sections of the eye in all its stages of development have been regarded...
