INTERACTIONS OF PROTONS WITH NUCLEI (SUPPLEMENT TO I/13A,B,C) (HARDBACK)

Springer-Verlag Berlin and Heidelberg GmbH Co. KG, Germany, 1994. Hardback. Condition: New. 1994 ed.. Language: English . Brand New Book. The precise knowledge of production cross sections for specific radionuclides for medium energies (10 MeV to 100 GeV) of the incident particle gains ever more importance, not only for nuclear physics but also for many applications, e.g. astrophysics, radiation protection at accelerators but also on space flights, radioisotope techniques in medicine and for industrial applications and perhaps even for the removal of nuclear waste by accelerators. Since the last systematic review of these production cross sections in 1973 (LB I/5a, b, c) an impressive amount of new experimental data has been accumulated. In the first three parts of this volume already a huge amount of data has been compiled for the production of radioisotopes by medium energetic protons on targets from He to Am. The precise values of the cross sections can be taken from the tables, whereas the figures show the general trend of the cross sections and can be more readily used for interpolations. In the fourth part of this volume supplement data for subvolumes I/13a, b and c will be compiled. The origin of the authors made it possible to include also data from the USSR and other East European states which sometimes are not easy to access. The tables and figures have been compiled with extraordinary care and should present the most complete compilation for this type of nuclear reactions.
