When this union is complete, we will take off the posterior protruding internal tuberosity of the tibia. There will be an excessive bowing backward of the leg in that position, but that excessive bowing does not matter so long as the line is plumb in her leg. That is the most important factor. You can see that the joint has not been hazarded at all. We are not in the joint, and the joint has not been disturbed. I am going to overcorrect the leg in the direction of adduction, because it will come back some on account of tension on the ligaments. Deep sutures of catgut and superficial horsehair sutures close the wound. No drainage. Subiodid of bismuth powder is applied freely; the line of incision is covered with gauze wet with collodion, and then a plaster-of-Paris cast is put on, extending from high up on the thigh down below the ankle. This cast will be worn for three or four weeks, and then a long sole-leather leg and thigh case, laced in front, will be worn for several months. The patient will not be allowed to put any weight on her leg for at least six or eight weeks. Passive motion will be instituted after two weeks. I put the bandage on this leg at an acute angle, so as not to get any too great tension if the knee swells. That bandage can stretch without...
