Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book \*\*\*\*\* Print on Demand \*\*\*\*\*.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1893 Excerpt: .with inhibition of inspiration. Cheyne-Stokes respiration; a pathological condition in which breathing is periodic, a pause of to \$ of a minute being followed by an ascending and descending staircase of respirations. A somewhat similar form of respiration can be produced in animals by dividing the medulla transversely. Division of the vagi removes the periodicity, irregular spasms taking its place. Hibernating animals take a deep breath, followed by shallow breaths and then a pause. It appears likely, therefore, that Cltei/ne-Stokes respiration depends upon the absence of controlling impulses which normally descend from above. The experiments upon animals throw no light upon the ascending staircase. Sherrington.-- Note on Cheyne-Stokes Breathing in the Frog, Jour, of Phys., vol. xii. p. 278. Mann.-- A Contribution to the Study of Cheyne-Stokes Breathing, Brain, vol. xiii. p. 178, 1890. EFFECT UPON THE CIRCULATION. Ill Problems in respiration can be solved if three things are borne in mind: --1. Fresh air contains 21 /o of O<sub>2</sub>, although about 6 or 7 /0 is sufficient to allow of respiration. On the other hand, if CO<sub>2</sub> accumulates in alveolar air to the amount of about 8 /o, its further exit from the blood becomes impossible. In a confined space, therefore, even though it contain nothing but oxygen to start with, death occurs from accumulation of CO<sub>2</sub>. 2. Carbonic acid is a narcotic poison. Hence the violent convulsions produced by deficiency of oxygen are not seen when the blood is saturated with carbonic acid. This...
