Reviews

This ebook is worth purchasing. It is written in straightforward words and not hard to understand. You will not feel monotony at any time of your respective time (that's what catalogs are for about in the event you ask me).
(Eileen Kling 1)

ANNUAL REPORT, OCTOBER 1, 1979 THROUGH SEPTEMBER 30, 1980: PART II-B, DIVISION OF CANCER BIOLOGY AND DIAGNOSIS (CLASSIC REPRINT) (HARDBACK)

Forgotten Books, 2018. Hardback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Excerpt from Annual Report, October 1, 1979 Through September 30, 1980: Part II-B, Division of Cancer Biology and Diagnosis Next year the entire Contract Program will be at the level of about a more than conversion in three years from contracts to grants. The Tumor Biology Program supports a broad spectrum of basic biological and biochemical research in the pursuit of one overriding goal, defining properties of cancer cells and tumors that uniquely distinguish them from normal, healthy cells and tissues. There are three major areas of investigation which correspond to different theories of how to control the development and progression of neoplastic disease. The first is under standing the basic biochemical mechanisms involved in growth control, whether these involve particular external signals that initiate the process of cell division or particular internal molecules more directly responsible for dna replication and metabolism. The second is studying changes that occur at the molecular level which lead to cancer cell invasion. The invasion behavior of cancer cells is a prerequisite to malignancy, or the ability of tumors to invade surrounding tissues, escape normal host defense mechanisms and become established at multiple secondary metastatic sites. The third is to develop detailed biological and biochemical information about the processes which induce cancer cell differentiation. There is good reason to believe that many kinds of cancers will respond to external stimuli and differentiate. If the genetic program of an actively growing cancer could be changed to one of terminal differentiation, then the malignant tumor could be rendered harmless. The Immunology Program is composed of three sections with focus on Molecular Immunology, Cellular Immunology and Clinical Immunology. Support is provided for a spectrum of research which reflects the need...
