Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1912 Excerpt: .reaction rims of epidote have formed in some places, and in several sections borders of secondary brown hornblende are prominent. The latter deserves special mention. Secondary brown hornblende.-- Secondary brown hornblende is present in many, but by no means all specimens, varying from a mere trace up to 2 per cent and more. It is confined to those thin sections in which the diallage is well preserved, and almost without exception forms contact borders between epidotized labradorite and PLATE IX. A. Photomicrograph of diallage crystal in gabbro, showing rims of brown hornblende along the contacts with feldspar. The black veinlet at l-l is limonite. Magnified 30 diameters. Without crossed nicols. Section 30. B. Photomicrograph of partly saussuritized gabbro. The upper left-hand quarter shows a labradorite crystal (l) with but little alteration. The right-hand half shows an extinguished labradorite cut by a network of albite veinlets (a), S...
