It is in a single of my personal favorite publication. It usually fails to charge an excessive amount of. Once you begin to read the book, it is extremely difficult to leave it before concluding.

Let us first try to grasp what evolution is. If we look at an elephant, a horse, a deer and a boar, we see that they are distinct types of creatures, having very little in common. Yet these, and others, we know are related (Fig.1). Bones have been dug up of the ancestral forms of these creatures, and by a study of them we know that long ago they were not so widely different as they are to-day. Zoologists tell us that far back in the Eocene age there existed the ancestral types out of which they have descended; these ancestral types (Condylarthra) not only differed less among themselves than do their descendants, but also there were fewer of them.
