Applying load to the motor will change not only all the phase relations, but also the amplitude of the current. Fig. 59 is designed to show the result of loading the motor when its excitation is such as to produce a lagging current at no load. The energy transformed by the motor into mechanical work is: it. P2IEicosd2. As the load comes on the armature of the motor is held back so as to increase the lag of OE_v while OE_s Z_{m1} increases until the above equation for P2 is fulfilled. It will be seen that increasing the load may bring the current into phase with the impressed E. M. F. A similar action takes place if the motor excitation is such as to produce a leading current at no load. This is shown in Fig. 60. Experiment ix....
