Not illustrated. 1921 Excerpt: . . . and the abundant use of material from physics and mechanics. Their graphical representation necessarily requires the use of the algebraic polynomial. Such books are the most hopeful of any we have in teaching the calculus to younger pupils. These two books were reviewed by Mr. M. A. Norgaard. A study of these works would seem to show that a course in the elementary calculus in the senior high school should have its theory based upon algebraic polynomials with the explanations given by means of graphical representations. The work should be closely allied to physics and mechanics by the use of a sufficient number of suitable problems from these fields to give reality to the subject and an insight into the wide use of the calculus in applied fields. 4 4 This is the method that is followed in the course of which a synopsis is given in Section VII of this study. VI THE TREND OF AMERICAN EDUCATION IN GENERAL THE INCREASED LENGTH OF SCHOOL ATTENDANCE Not many years ago the educational scheme for our public schools was extremely limited. A few years of a few months each was the extent of the intellectual training of a pupil, and this was looked upon as sufficient for the conditions of those times. As conditions changed, so also did the scheme of education, but less rapidly. The reason for this is that our educational system, like the church in this respect, is among our more conservative institutions. Before...
