Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1906 Excerpt: .The effect of the median furrow on the radio-medial cross-vein is seen in the wings of *Kmra*, *fteronus* (fig. 5), *ClmJius* (fig. f()), and *7V/#ti/liorii*. In this latter genus there exist all stages from a fully preserved radio-medial cross-vein to its entire disappearance. In the genera *Monoctenus* (fig. 67) and *Lophyrua* (fig. 45) an intermediate sidewise development is shown in certain species where only the posterior half of the cross-vein has atrophied, while the anterior half is fully preserved. That the loss of the free part of *Cu.*, is clue to the anal furrow is seen by an examination of the wings of the following genera in the order named: *Bactrceroa* (fig. 41), *l innphilus* (fig. 3!), *Ci jthalcia*.(fig. 4), *Ltjtla* (fig. 37). *Csenolyda* (fig. 38), and *ltycomia* (fig. 40). In these genera there is a complete series from a fully formed *Cu3* to a minute swelling on the side of *Cu*. The anal furrow is the most important as well as the most prominent and persistent furrow found in either wing. It is found in the same position throughout the entire order *llymenoptera*. It is this furrow that furnishes the flexibility in movement between the two wings. *Cu3*, having been separated from the anal veins by this furrow, could be of only secondary importance in supporting this area; in fact it is more efficiently supported in the wing of *RU imocampa* without it than it is in the wing of *Bactroci nts* with it. The...
