Good electronic book and valuable one. It is one of the most incredible publication we have read through. It is extremely difficult to leave it before concluding, once you begin to read the book.

This, however, is not the equation of the older school, interesting as that puzzle was to most students and profitably as it may therefore be used as drill material; it is now the real equation, introduced naturally and used with a definite purpose. Following this work there naturally comes the graph of the formula, and thus the graph becomes something more than a mere picture of statistics of population of a territory or of the attendance in a school. If the graph is a curve, this curve may drop below zero, and hence the negative quantity enters naturally and tangibly. In a half year, therefore, the student comes to know the nature of and the uses for the four great features of elementary algebra, --the formula, the equation, the graph, and the negative number. He may know nothing of algebraic addition, or of any other operation; he may not know what a polynomial is; but he knows some of the great things of algebra, and he has accumulated a few practical tools which he can use in his reading about the simpler laws of mechanics and-industry. What does psychology now suggest? Naturally that the student should at once apply his algebra to arithmetic as well as to mensuration. To meet this natural demand there may now be introduced those wider ranges of business arithmetic for which the student's maturity of experience in mathematics and in his relation to life has prepared him....
