Research Paper from the year 2010 in the subject Computer Science - Internet, New Technologies, grade: 1. 7, University of Applied Sciences Berlin, language: English, abstract: Since Apple released the iPhone in 2007 the conversion into a mobile web has accelerated strongly. This paper discusses the challenges resulting from that shift. The diversity of platforms and device specifications put a heavy burden on developers. While each platform offers an own proprietary API for developing applications it is often desirable to develop applications platform independently. One possible way today is to use web technologies. Although this offers a platform independent API many commonly used system APIs are not accessible. For most applications this is not acceptable since the use of sensors and file IO is a premise to build modern user experiences. It is one of the most popular books. I am quite late in starting to read this one, but better than never. Once you begin to read the book, it is extremely difficult to leave it before concluding.

An incredibly great book with perfect and lucid answers. Better than never, though I am quite late in starting to read this one. You will not sense monotony at whenever you want of the time (that's what catalogues are for relating to if you question me).
