The rapid growth of this method of steel making is due to the fact that high grade steel can be made from all grades of iron, and that the composition of the product is easily controlled. The open hearth process is divided, according to the practice, into the Acid and the Basic processes. ACID All open hearth furnaces are of the Siemens type. The sectional drawings (Figs. 53 and 54) show the principal parts of an ordinary open hearth furnace. The hearth is supported on I-beams resting on girders, which in turn, are supported on the masonry below. The regenerators, shown in Fig. 53, are for heating the air and gas before they enter the combustion chamber of the furnace. They are admitted into the regenerators on one side while the products of combustion are heating those on the opposite side. The products...
