Forgotten Books, 2018. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****.Excerpt from Nec: Standardization Strategy for a Distributed Software Factory Structure As they made progress in process standardization, nec managers gradually changed emphasis to quality control and reusability of code as key ways to improve overall productivity. This shift in thinking can be seen in a 1986 interview, where Mizuno discussed the two components of his strategy for achieving continuous increases in productivity: (1) a rigorous quality control program to prevent errors, which become difficult and expensive to fix after a program is released to the customer; and (2) accumulation of knowledge about software engineering and passing this on to others through (a) reusable software modules, (b) reusable program patterns, and (c) bug or failure analysis and the development of better test rules and check points. Sea/i (alternately known as Software Engineer s Arms and System Engineering Architecture Mizuno considered a first step in the development of an automatic programming tool using this accumulation of knowledge concept.19 Thus, building upon process standardization and control as the foundation of a factory approach, Mizuno now explained the software factory as a concept for maximizing the accumulation of experience and capturing this experience in control systems, tools, and process inputs (reusable code or designs) About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.
