S. Chand & Company Ltd 0. Softcover. Condition: New. 5th or later edition. This thoroughly revised and updated edition includes recent developments in Optical Fibre Technology. It begins with a discussion on the principles of fibre optical communication and advantages of optical fibre characteristics. Mode and Ray theories for optical fibres and transmission characteristics, including loss mechanism and dispersion properties of optical waveguides, are reviewed. In addition to providing comprehensive coverage of communication components of fibre optic systems, such as coupling devices, connectors, splices, modulators and photoreceptor optics, the book provides extensive coverage of fibre optic communication systems such as LAN, FDDI, ISDN, coherent optical detection and SDH. Fibre characterization procedures and standards have also been given adequate coverage. A short introduction to integrated optics useful in fibre optics in general and optical fibre telecom applications in particular is given at the end of the book. Review questions and references are provided at the end of each chapter. As in the first edition, the emphasis throughout the book is on both the theoretical and practical aspects to show how the components of fibre optic systems are put together to achieve techno-economic solutions. The book would be useful for students following optical communication courses at undergraduate and postgraduate levels and for telecommunication professionals wanting a quick introduction to the field. CONTENTS: 1.Principles of Fiber Optic Communication 2.Fiber Optical Source Devices 3.Mode Teory for optical fibers 4.Ray Theor for Optical fibers 5.Fiber optical communication Components 6.Fiber optical Communication System 7.Optical Fiber Measurements Printed Pages: 448.
