Reviews

Basically no phrases to spell out. It is actually rally interesting throgh studying time. You can expect to like just how the article writer create this publication.

(Braden Leannon)

CREATION: TOWARDS A THEORY OF ALL THINGS

Paperback. Book Condition: New. Paperback. 158 pages. This book considers the origins of the Universe, the formation of our solar system and the emergence life on Earth 3.9 billion years ago, leading to the eventual evolution of Homo sapiens some 200,000 years ago in East Africa. It argues in favor of the existence of extraterrestrial intelligent life elsewhere in the Milky Way galaxy and in the cosmos. Creation seeks to reconcile Darwinian evolution with intelligent design theory where possible. Human beings are not descended from modern apes, but bipedal hominids were evolved from a common ancestor some 7 million years ago. Kants, Wallaces and Darwins hypothesis that all life shares common ancestors is proved by the convergence of the sciences. Yet, it does not follow that new species originate from natural selection and random mutations, or that life emerged on its own from a prebiotic environment. Darwins theory of origin of species remains unsubstantiated and is refuted by modern microbiology as a theory of origins. The Universe really is 13.75 billion years old and commenced with the Big Bang. The expansion is still ongoing and galaxies continue to rush away from each other. Earth is some 4.5 billion years old. But what caused the Big Bang How was the Big Bang organized into the formation of galaxies, star systems and numerous living worlds What is the role of black holes in galaxy formation What caused complex life to emerge and evolve on Earth but nowhere else in this sun system -- as of NASAs latest discoveries Why have the Martian Rovers and other spacecraft uncovered no fossils or organic carbon on Mars although salty oceans once covered much of the Red Planets surface Why are three-quarters of the Earths surface covered with liquid water yet liquid...
