By Perez C

Createspace Independent Publishing Platform, 2017. Paperback. Condition: New. Language: English . Brand New Book ***** Print on Demand *****. Matlab incorporates a wide variety of statistical models for the design of experiments. A one-stage model fits a model to all the data in one process. If your data inputs do not have a hierarchical structure, and all model inputs are global at the same level, then fit a one-stage model. If your data has local and global inputs, where some variables are fixed while varying others, then choose a two-stage or point-by-point model instead. A two-stage model fits a model to data with a hierarchical structure. If your data has local and global inputs, where some variables are fixed while varying others, then choose a two-stage model. For example, data collected in the form of spark sweeps is suited to a two-stage model. Each test sweeps a range of spark angles, with fixed engine speed, load, and air/fuel ratio within each test. If your data inputs do not have a hierarchical structure, and all model inputs are global, at the same level, then fit a one-stage model instead. For two-stage models, only specify a single local variable. If you want...
