Excerpt: .also that there may be in them an element of harm. The mechanism producing the untoward effects has not been demonstrated as yet, but it may consist in the exaggeration of the pathologic process already existing by the introduction into the subdural space of a foreign substance. Marked meningeal symptoms have been observed following the introduction of serum, both in the experimental and human disease. In some instances, the spinal fluids obtained after the injection of serum have shown distinct evidences of accentuated inflammatory reaction, as indicated by increased turbidity, due to increase of cellular elements and increase in the content of albumin and globulin. That this meningeal reaction may have a deleterious influence on the already existing pathologic process in the cord and brain proper, is not without plausibility. Careful comparative study of the nervous tissues of the serum treated and the control...
